FORGOTTEN DURING COVID: AN ASSESSMENT OF IMMIGRANT NEEDS IN THE PANDEMIC

DISASTER RELIEF ASSISTANCE FOR IMMIGRANTS SUMMER 2020

COLLABORATING ORGANIZATIONS

PREPARED BY
Lorraine Tamburrino, Data Analytics and Evaluation Manager at CHIRLA
To respond to the COVID-19 health crisis, and to recognize the contributions of undocumented immigrants to its economy, the state of California, again leading the nation in social justice and equity for its people, in May launched an unprecedented assistance program for immigrants affected by the pandemic. With an allocation of $75 million, the Disaster Relief Assistance for Immigrants (DRAI) program served more than 150,000 undocumented people, disbursing an estimated $500 per household in direct aid.

California is home to approximately 10.6 million immigrants (2 million undocumented) who pay nearly $39 billion ($2.5 billion for undocumented immigrants) in state and local taxes each year. This report presents the results of statewide data collected by six organizations that qualified applicants and distributed the funds. It presents the various unmet needs reported by the applicants. It also shows how the DRAI aid, while welcome, falls severely short of the amount needed to truly address the urgent needs of the immigrant community. This data set of 91,000 records compiles insights from the largest survey of undocumented immigrants in recent years.
Over half of the assistance recipients were women (7% of applicants declined to state their gender). Most of the applicants that were impacted by school closures are women between the ages of 36 to 50.

Covering housing expenses is the most pressing need in the face of this crisis for the recipients and the most common unmet need where they want to allocate the assistance.

Housing related costs such as Utilities is another category of needs where recipients plan to allocate funds.
More than half of the total recipients report unmet needs for food (54%). Of those that have children at home, 53% report that they will use the assistance to secure food.

While health coverage was not captured in the application for DRAI, previous surveys from CHIRLA and from other organizations places health coverage among the immigrant population at around a 69% rate of health coverage.

The health impact of the COVID19 is hard to measure but at least 3% of the applicants where experiencing symptoms at the time of application, and at least 1 in 10 suffer underlying health conditions, which can result in high medical expenses that they may be challenged to cover.

Notes: Total recipients accounted for in this report N=91,042 is a portion of the total recipients for the entire DRAI program sponsored by the State of California via the Disaster Relief Assistance for Immigrants program. Six participating organizations: CHIRLA, Asian Americans for Justice, California Human Development, CARECEN, Community Action Board of Santa Cruz, Jewish Family Services of San Diego, UPW Foundation. Analysis by: L. Tamburrino, Data Analytics Manager and Evaluation at CHIRLA
Below we present estimate calculations of how far this money can go for a family of four assuming at least one Adult in the household received the assistance. These scenarios take into account an adjusted Consumer Price Index for the region of Los Angeles, however recipients included all regions across the state including higher priced areas.

**How much does a two-bedroom apartment costs in Los Angeles?**
To narrow down the area of highest impact, we searched in the zip-codes where most applicants live: 90011, 90006 and 95404. A search of unsubsidized and subsidized housing available in October 2020 showed the average rent for a subsidized apartment at $1,232 and average un-subsidized rent prices hovering between $2,400 to $2,600 per month. (1)(2)

Utilities are pricier in Los Angeles.
As of May 2019 data, the average price for electricity, heating, cooling, water, and garbage for a 915-square-foot apartment in Los Angeles was $138. The Bureau of Labor Statistics indicates that in the past five years, prices paid by Los Angeles area consumers for electricity exceeded the U.S. average by 23%. (3)

GRAB N GO MEALS PROGRAM: A LIFELINE FOR FAMILIES

According to the department of Agriculture, Food and Nutrition Service, Food USA Plans Report estimate that for September 2020, a family of 4 in the US would spend $1339 per month in groceries. Consumer Price Index for Los Angeles rose 4.2% for Food and other items during the past year. In sum, a family of 4 should expect to spend nearly $1,400 per month or $46 per day in meals at home. (4)

While $500 could reasonably cover the meals for approximately 10 days, Grab n’ Go programs from LAUSD offer relief to families that depend for meals at a rate of two meals per day during the virtual session in school days. This is a necessary lifeline and using the government estimates, a family of four can save $75 per week if two children receive meals. School meals can extend the $500 assistance for two additional days.

KIDS AT HOME
WHAT FAMILIES NEED TO SUPPORT ONLINE LEARNING?

45%
Recipients affected by school closures

As families experience having kids stay at home for distance learning the face can result in severe financial stress.

Higher Food Consumption. A recent study by NIH with over 3,500 participants reported that 48% gained weight during the pandemic. Mainly related to extended periods of staying at home leading to boredom and food stockpiling. (5).

Internet and Distance Learning Equipment
Fast internet is necessary to video-supported distance learning but according to the 2019 American Community Survey 18% of Hispanics in the Los Angeles region say they don’t have consistent access to the internet (6). With 87% of the recipients preferred language being Spanish we can assume that many families are challenged to meet this need. The average cost of internet service in Los Angeles can go upwards to $66/month (7).

Childcare Costs Childcare. This high cost necessity that for some families it means that one of the parents (likely the women) will need to stay at home to meet because they can’t be afford it (8). The mean for childcare cost for school aged children in Los Angeles is $790/ month, but that number nearly doubles to $1,400 for infants (9).
IMPOSSIBLE TRADE OFFS

A family of four that has two school-aged children who receive school meals and lives in an un-subsidized two-bedroom apartment in Los Angeles should expect to spend $802 per week or $3,200 per month to meet their most basic needs of shelter, food, transport (1 pass) and utilities (no childcare). These numbers contrast with the stark reality of receiving only $500 as Assistance and the steep gap they face to meet their needs during the COVID-19 pandemic.
